INTERNATIONAL PERSPECTIVE. LOCAL IMPACT.

A SUSTAINABLE
BRIGHTER TOMORROW

Executive Summary

IRG MYWAY V2 is a digital-token initiative associated with IRG MYWAY LLC, currently documented for technical evaluation on the TRON Nile Testnet. This document is a company-acknowledged description of the testnet project, not a securities offering, a public sale, an exchange listing, or a claim of independent contract certification.

1. Corporate Context

IRG MYWAY LLC is registered in Georgia (registration number 404549958; incorporation date 28 December 2017). Its business areas include international business development, investment, energy, infrastructure, construction, real estate and corporate services. Token ownership does not provide shares, profit participation, rights over company assets, or corporate voting rights.

2. Token Identification and Verification Limits

Network: TRON Nile Testnet
Project / Token: IRG MYWAY / IRG
Reported contract: TBuwXoGbhMbZRwHeZcWiLQsksTFMJ3yqp5
Reported treasury: TM3h5UPYjGZSEcAcL6YXQUnna5wCXHaXu5
Decimals: 8
Initial configured amount: 1,000,000 IRG
Maximum configured amount: 700,000,000 IRG

These identifiers and quantities come from project records and require independent reconciliation against deployed contract code, live supply, permissions and on-chain history. The maximum configured amount is not asserted to be an immutable enforced cap.

3. Historical Contract Distinction

Project records also describe a historical 2021 TRON Mainnet token at TTkrEnvHmYqR4AZboVAtg2H4fC9E7m4cQZ. That contract is separate from V2 on Nile. No bridge, conversion, exchange ratio, balance migration, or continuity of holder rights is established.

4. Testnet Functionality and Proposed Utility

The present scope is controlled demonstrations of wallet connectivity, transfer workflows, transaction review and technical interfaces. Potential future service access or project-information functions are proposals only. No staking yield, dividends, redemption, guaranteed value, merchant acceptance or financial entitlement is offered.

Technology, Governance and Risk

5. Tokenomics and Distribution

No public distribution, allocation percentages, vesting schedule, price, sale timetable, market-making plan or buyback commitment has been approved. Reported supply figures do not prove circulating supply. Any future tokenomics must be reconciled with on-chain state and authorized in a separate company decision.

6. Technical Controls

Before expanded use, the project should verify contract source-to-bytecode correspondence, ABI, administrator and mint/burn permissions, upgradeability, allowance behavior, supply restrictions, treasury access and key-management controls. The public token page is an interface and does not establish security of the underlying smart contract.

7. Security and Governance

Release backups, documented authorization, incident response, segregated credentials and independent security review should be maintained. No third-party smart-contract audit, regulatory approval or independent legal opinion is claimed in this whitepaper. No signing, broadcast, treasury movement or mainnet deployment is authorized by this document.

8. Development Roadmap

Stage A: Record and reconcile contract, treasury and supply evidence.
Stage B: Conduct controlled Nile-only technical tests and website checks.
Stage C: Obtain independent security and relevant legal/compliance reviews.
Stage D: Specify and validate any proposed utility and governance policies.
Stage E: Make a separate written decision about any future mainnet or public activity. No timeline or launch is promised.

9. Risks and Legal Notice

Testnet assets may have no monetary value and testnet infrastructure may be reset or discontinued. Risks include coding errors, unauthorized privileges, key compromise, irreversible transfers, network interruption, inaccurate disclosures and changing laws. The classification and distribution of digital assets vary by jurisdiction. This document is informational only, not financial advice, an investment solicitation, a prospectus, a security audit or legal clearance.

10. Official Communications

Project information: https://irgmyway.group/irg/ . Corporate website: https://irgmyway.group . Corrections and future changes should be versioned and archived. No public sale or exchange trading is authorized by this publication.

Executive Acknowledgment

IRG MYWAY LLC acknowledges this document as a description of the **TRON Nile testnet documentation and review stage only**. This acknowledgment does not certify on-chain tokenomics, smart-contract security, legal compliance, regulatory status, market value or fitness for investment.

Publication scope: informational testnet whitepaper. No public sale, exchange listing, mainnet deployment or distribution authorization is granted.

Hamid Bastamikatouli
Chief Executive Officer | IRG MYWAY LLC
Executive acknowledgment of testnet-stage documentation
Date: 5 November 2026

Outstanding independent verification: source/bytecode, supply and privileges, treasury controls, security review, legal classification and any future distribution terms. These remain open requirements, not approved facts.
